

The Solution for Successful Asset and Maintenance Management

What do you need to keep production up and running?

Do you need to maximise production uptime and get the best performance from your assets?

Do you know which assets need high levels of reactive maintenance and cause production disruption?

If you need to drive down costs, monitor and measure asset and maintenance performance, we have the solution.

It's called Agility.

Agility is a powerful and flexible EAM (Enterprise Asset Management) solution that gives visibility of your asset and people performance for planned and reactive maintenance – all in one single system. Agility is a powerful technology platform being used in manufacturing environments around the globe.

So what does Agility do?

Agility gives you a clear picture of your assets, their health and performance, and the resources needed to maintain them. Your people, their workload and skill sets are clearly visible enabling you to efficiently manage their time. Agility also allows you to manage inventory, purchase orders and external contractors giving you a real time overview of performance and costs. Repair time, reactive maintenance and production downtime can all be reduced with Agility.

How does Agility work?

Agility is a powerful platform that captures and stores key information which can then be interrogated, reported and audited. It enables you to build a multi-tiered asset register so you can understand relationships and dependencies at a glance. Agility provides a single reference point for asset information and documentation such as service requests, warranties, technical drawings and website links. Key information, such as meter readings, can be captured enabling you to monitor and measure your asset health. Feedback comments from engineers along with photographs of assets can also be gathered so that future work can be planned more efficiently. Agility manages scheduled maintenance work alongside reactive work and helps optimise the use of resources needed to complete it.

Managing your most valuable resources

Your people are your most valuable resource; with Agility you can understand each individual's availability, their skill sets plus any training and certification requirements they may have. Planned work can be scheduled into the future taking account of resource requirements and workload, allowing plans to be made. Urgent unplanned work can be automatically

scheduled to the most appropriately located and skilled individual, saving administration and minimising repair times and lost production.

Real-time detailed performance information

Causes of breakdowns and disruptions to production can be quickly and easily identified. Agility's dashboard gives you an overview of all your KPI's which can then be interrogated and drilled into to discover the detail behind the issues you face. Maintenance, inventory and labour costs can be monitored and controlled. Agility gives access to key measures including; Mean Time Between Failure (MTBF), Mean Time To Repair (MTTR), fault and Pareto analysis. With Agility you can base decisions and plans on facts and actual performance.

Simple and intuitive to use

For all users, the real key to Agility is its simplicity; easy to use, clear and concise screens allow data to be captured and work requirements to be understood and actioned. Agility Mobile Solutions provide access to Agility for those working with tablets and phones in both on and offline environments across your sites.

Developed through years of manufacturing experience

SSG Insight is a company with over 30 years' experience of providing both CMMS (Computerised Maintenance Management Systems) and EAM solutions for manufacturing. This puts us in the best position to understand the challenges you face – daily. With experience in car manufacturing to food processing and aerospace, we have proven time-after-time that we can deliver operational efficiencies and reduce costs.

Flexible and adaptable

Agility is completely dynamic and flexible, it can interface with your existing business systems including ERP and finance systems such as SAP to create one connected work and information flow. We don't present a one-size fits all solution. We know that within the same organisation, departments can have different information and reporting requirements. Agility is flexible enough to accommodate these differences whilst still giving you an overview of performance and effectiveness.

You may be using a manual system or be frustrated with the limitations and inflexibility of your current computerised one. We know that with Agility we can revolutionise the way you operate.

This is just a small introduction to a system that could revolutionise the way your production operates.

If you'd like to discuss how Agility can work for you please visit www.ssginsight.com

Agility has many features and functions, here we've detailed a selection to show how Agility could work for you...

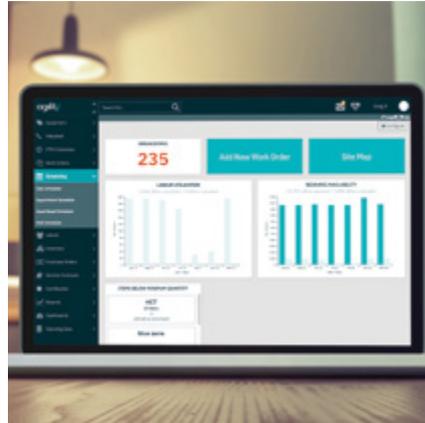

Agility Mobile Solutions

You need to quickly and efficiently communicate with all your team.

Agility Mobile Solutions give your team access to Agility from a mobile device with simple to use, intuitive screens.

With Agility Mobile Solutions your team can actively work on the move, saving time, reducing administration and increasing productivity.

- Working in both on and offline environments, Agility Mobile Solutions ensure the whole Agility system is updated once the network connection is re-established.
- Checklists and risk assessments can be enforced at key stages in a workflow, ensuring compliance.
- Key information and feedback can be captured such as meter readings and photographs building up a detailed picture of asset performance.

Dashboard & Reporting

You need complete transparency of asset and workforce performance.

Agility allows you to set and monitor your KPIs using both an intuitive dashboard and a reporting feature.

Easy to use and navigate, performance information can be interrogated and drilled into to enable faults and causes to be identified and understood.

- Dashboard view can be tailored and adapted to make the most relevant information available to each user.
- Drill down capability enables quick and easy identification of issues and causes.
- Agility includes over 100 standard reports which can be used to generate key performance information.

Inventory & Purchase Orders

You need a clear picture of inventory and purchases associated with your assets.

Agility provides you with a powerful multi-stores and multi-currency inventory and purchasing system.

The ordering of inventory and the raising of purchase orders can be automated creating one efficient workflow.

- Purchase orders are raised based on stock levels and ad-hoc requirements, PDF's are created and sent to suppliers.
- Purchase orders can be routed for approval accommodating internal sign off procedures and authorisation levels.
- Agility can be integrated with corporate ERP and account systems to streamline work and information flow across whole organisations.

This is just a small snapshot of some of the capabilities of Agility. If you'd like to discuss your existing system or want to know more about Agility please visit www.ssginsight.com or contact your nearest SSG Insight office
